

Ghamdan Al-Yamani Piano

HTML:

1. Create an HTML “index” file with a container element to hold the buttons.
2. Inside the container, create 7 buttons with unique IDs (e.g., button1, button2, etc.) by Classes.
3. Add an onclick attribute to each button, calling the JavaScript function `playsound` with the corresponding note number as an argument.
4. tag audio to get my notes sound from file “notes” and used in my js file by id.

CSS:

1. Create an HTML “main” file.
2. Style the buttons using CSS to achieve the desired visual design.

JS:

1. Create a JavaScript “main” file with function named `playsound` that takes a parameter `note`.
2. Inside the `playsound` function:
 - a. Create a variable `audio` and assign it a new Audio object.
 - b. Set the source of the audio element to the file path of the note using the `note` parameter.
 - c. Call the `play` method on the `audio` object to play the sound.
